

COSMO PU Polyurethane Adhesives

Extended storage stability of up to 24 months

Continuous further development of our products and their storage stability is part of the core competencies of Weiss. For our customers, higher storage stability means a higher level of flexibility and processability. In this way, by optimisation of raw materials, by selection of packages, as well as production and filling processes we could extend the storage stability of our PUR adhesives to a maximum of up to 24 months.

ADVANTAGES

- Extended storage stabilities of up to 24 months
- Higher product safety
- Larger order quantities as well as higher storage capacities possible

Safety generates confidence

LOW-EMISSION ADHESIVES FROM WEISS
GEV-EMICODE®-licensed products

EMICODE® is a recognised standard for construction products (adhesives, amongst others) promoting healthy living and is a quality label for the proof of low VOC-emissions. Products labelled with EMICODE® are modern, solvent-free and low-emission construction products.
